

**Notes: Walkthrough**

PostgresSQL database where all user and vehicle data kept

An express backend that will offer CRUD ability to register or authenticate user, update user details and vehicle data

User will register or login to gain access to protected routes upon successful validation

a location specific landing page will display all currently actively parked vehicles on their screen along with a form to filter those vehicles by any collected vehicle information

each vehicle Card will display the ticket number in a card and will be a Link to the vehicle detail /vehicle details Component

Vehicle detail component will have buttons to checkout / delete this vehicle from the current vehicles view,

the vehicle data will be kept in the database to be used for future reporting / data analysis
